(will move to github soon)

Open Projects List

Here is List of open projects, an open call for contributions. This is core to plebnet.dev to help us grow as an org as well as the FOSS ecosystem.

Projects on this list are sponsored by a mentor, if you want to lead a project let us know and we can add it to the list. If you are new to open source, start small, consider writing a blog entry, find an open issue or work on documentation and/or testing. If you're more ambitious and/or have some experience feel free to pick up a project and take it on.

Beginner friendly
